

Technical Specifications

Rating of power supply: AC/120V/60Hz

Tank capacity: 300ml

Max capacity of water cup: 175ml

Rated power: 900W-1050W

Temperature controller: functioning temperature 135 degrees Celsius

Overall dimension: 285X145X225mm

Net weight: 1.36kg

User Manual for Enviro Steam

Product Description

The Enviro Steam is to be used to kill bed bugs that get in areas or items that cannot be treated inside of the Enviro Case.

Product Characteristics

- Higher Safety

Designed to prevent heating the empty boiler. After the water in the boiler tank is heated and evaporated completely, the machine will automatically disconnect the power supply and thus prevent empty heating.

Temperatures of 135 degrees Celsius are reached with the Enviro Steam.

The safety valve has automatic pressure release function. When there is high steam pressure in the tank, the valve will automatically open and release the pressure.

Supplied with a 3-pin power plug, so that the tank and heating disc can be grounded, in order to ensure safety in operation.

Extended power cord with double insulation, can effectively insulate the cable from water and dust, to ensure safety.

- Durable

The machine is designed with aluminum alloy die casting boiling body with an extra-thick inner wall. It can resist high pressure and has a long service life.

Complete plastic shell is made from quality PP and PA with anti-corrosion and high strength.

- Energy- saving

With integrated design of specially-made heating tubes and boiler body, overall heating is provided, high heating efficiency and energy-saving.

Double-layer shell structure can effectively prevent heat loss, environment-friendly and energy-saving.

- Easy to use

Switch on power supply and the machine immediately starts the heating process. Press the steam button and the steam will be sprayed.

With complete accessories supplied, the machine can be assembled and disassembled easily.

Description of Parts

1. Body
2. Short spray nozzle
3. Safety cap
4. Steam button
5. Handle
6. Power cord and plug
7. Power indicator
8. Funnel
9. Measuring cup
10. Spray cup with round brush
11. Bent spray nozzle
12. Long spray nozzle
13. Extended connecting spray nozzle
14. General spray nozzle
15. Spray nozzle
16. Towel sleeve

Safety Precautions

1. Do not allow children to operate this machine independently.
2. To prevent electrical shock, do not immerse power cord or power plug in water or other liquids.
3. The power cord and power plug should be in good condition and must not be damaged.
4. Do not turn on power supply until the tank is full of water.
5. During operation, the tank mouth must be plugged hermetically and safety cap should be tightened in position.
6. In use, the machine body must not be inclined at more than 45 degrees.
7. Do not direct the steam towards persons, animals or electrical products.
8. Before refilling, ensure to unplug the power cord to disconnect power supply. It is necessary to unplug the power cord after the machine is used.

Important: Do not overfill the tank, or otherwise the steam generation will be affected or too high steam pressure will be caused.

Operating Instructions

1. Unpack the product. It is recommended to use the **long nozzle** to get in crevices to kill the bed bugs. Attach this long nozzle to the Enviro Steam.
2. Place the Enviro Steam on a level platform, push down the safety cover, unscrew the safety cap counterclockwise, and then install the **funnel**.
3. Fill the measuring cup with 175ml of water. Add the water into the tank of the Enviro Steam. (Max. capacity of the tank is 250ml. Do not overfill the tank.) Re-install the safety cap and tighten it in position.
4. Plug in the Enviro Steam. About 4 minutes after power supply is turned on, Enviro Steam is ready.
5. Aim the nozzle toward the bed bugs and press the button to release the steam.
6. The bed bugs will be killed on contact with the steam.
7. Unplug the Enviro Steam when completed with use.
